MODULE DESIGN:

The major modules of the project are

- Administrator Module
- Publisher Department Module
- User Department Module

Test Cases:

TEST CASE 1 :

Test case for Login form:

When a user tries to login by submitting an incorrect ID or an incorrect Password then it displays an error message “NOT A VALID USERNAME”.

TEST CASE 2:

Test case for User Registration form:

When a user enters user id to register and ID already exists, then this result in displaying error message “USER ID ALREADY EXISTS”.

TEST CASE 3 :

Test case for Change Password:

When the old password does not match with the new password, then this results in displaying an error message as " OLD PASSWORD DOES NOT MATCH WITH THE NEW PASSWORD".

TEST CASE 4 :

Test case for Forget Password:

When a user forgets his password he is asked to enter a Login name, ZIP code, Mobile number. If these are matched with the already stored ones then the user will get his Original password.

Additional Requirement:

- Implement this project by using Node JS, Mongo DB, HTML and CSS. Include Security.
- Create respective backend REST APIs for individual use cases.
- Deploy the application on Azure Web Sites.

Final Outcome:

Provide me with the link of the portal for testing.
